## Interview: Dr. Robert Yoho and Covid

January 12, 2022

### **For The King** - Rocky Ramsey

This week, I speak with Dr. Robert Yoho on Covid and some of the deceitful things happening surrounding the virus.

Robert Yoho is 66 years old in 2020. He spent three decades as a cosmetic surgeon after a career as an emergency physician. His generalist training gives him perspective and allows him to avoid favoring any medical specialty.

#### ABBREVIATED PROFESSIONAL CV:

- ✦ American Society of Cosmetic Breast Surgery: fellow, trustee, officer, and past-president.
- ✦ American Board of Cosmetic Surgery: passed board exams and twice re-certified.
- ✦ American Board of Emergency Medicine: passed board exams and twice re-certified.
- ✦ Fellow American Academy of Cosmetic Surgery (inactive).
- ✦ New Body Cosmetic Surgery Center: founder & director (inactive).
- ✦ American Association Ambulatory Health Care (AAAHC) accredited surgical/medical practice for over 25 years.

Here are the links that Dr. Yoho asked me to upload

Covid is little to worry about if you have the proper medications and treatment. For the critical Joe Rogan/McCollough interview, see [HERE](#). For my podcasts, click [HERE](#). One of my best interviews is [HERE](#). Here is my essay [A BASIC GUIDE TO COVID](#). Another link, [WHY COVID IS SO HARD TO UNDERSTAND](#) has many references and more detailed explanations.

Peter McCullough, MD, is a famed academic. He reports that 85 percent of the fatalities would be prevented by ivermectin, hydroxychloroquine, vitamin D, and other treatments

used early and in combination.

Read more about the dangers of the “vaccine” [HERE](#) and listen to these two videos. Peter McCullough now believes the entire vax effort should be halted and studied. Here is a summary of Dr. McCullough’s video in the last link. We are killing more people in every age group than we are saving.

See [RobertYohoAuthor.com](http://RobertYohoAuthor.com) to learn about my books, *Butchered by "Healthcare and Hormone Secrets*.

## **Transcript**

Yeah, they had to change the definition of vaccination vaccine. I mean, it's like you couldn't make this stuff up. So in 2020, when I first heard the vaccine, and had 90 or 95% efficacy, I thought it was a joke.

I knew I'd been studying healthcare because I was writing *Butchered by Healthcare*, which is my book about healthcare on Amazon. And I knew this industry's primary vaccine moneymakers over the last 20 years are nearly useless. Influenza was a total failure considering the costs and the tiny benefits.

And you guys can go to Cochrane Reviews, C-O-C-H-R-A-N-E Reviews on the net and look at the meta-analyses, the summaries, and determine that for yourself. Don't think I will even ask you to make Jesus Lord of your life. That's the most preposterous thing I could ever tell you to do.

Jesus Christ is Lord of your life. Whether you serve him or not, whether you bless him, curse him, hate him, or love him, he is the Lord of your life because God has given him a name that is above every name so that the name of Jesus Christ every knee shall bow and tongue confess that he is Lord. Some of you will bow out of the grace that has been given to you and others will bow because your kneecaps will be broken by the one who rules the nations with a rod of iron.

And I'll not apologize for this God of the Bible. Okay. Hello everybody.

Thank you for tuning into the For the King podcast. As a quick reminder, as I always go at the beginning of our podcast episodes that we do this for the King who is Jesus Christ. He is the King.

And part of living in the kingdom of Christ is you just fall in love with truth and all truth is God's truth. And I am joined this week by a doctor now retired. He was a formerly an emergency physician and then he was a cosmetic surgeon and he's now retired and he was, you know, there's a ton of accolades, but the American Society of Cosmetic Breast

Surgery.

He was fellow trustee officer, past president, American Board of Cosmetic Surgery. You know, the list goes on and on. You can go to his website, robertjohoauthor.com. And he's also an avid climber and not really.

Yeah. Rocky, I'm 68. So yeah, I was, you did El Cap.

I mean, you can, yeah, you definitely have a, not just the brains, but the brawn is what I'm reading. But yeah, thanks for joining me today. And let's hear some truth.

So if there's anything else you want to let us know about you, and then maybe we can get into some of the questions about COVID. That's going to be the topic today. It's my pleasure to be here, Rocky.

Just ask away. Okay. And let me do the 30 second disclaimer.

I'm forced to do this because of the lawyers. So this is not medical advice. If you have a medical problem, see a doctor and use this info at your own risk.

It's my, you know, it's based on four years of study for me though. So I believe everything I say. Yeah.

Oh, as one should. Okay. So you have a, you know, one of your more popular podcast episodes on why COVID is so hard to understand.

And there's a lot of lies being perpetrated. You know, there's like four things that you walk through on there. So can you just maybe let's, let's get like, kind of catch us up to date because things have changed.

We know that Pfizer has had to release 500 pages worth of their intro study on the vaccine that they created. So you know, you know, what are some things there maybe we can think about more accurately. Yeah.

Okay. Well, we can get into the weeds, but I think we should start with the basics and there are things that are well understood now in the hospitals, even by the janitors, right? And the number one thing, the most incredible part of this narrative, which we can get to the reason why in a second, but kids should never get the vaccine because it kills far more of them than COVID over a hundred times more. It's outrageous.

And in another 30 seconds, the reason why they're getting the vaccine is they, if they get it approved for kids, and this is even kids 16 and 17, then they'll get permanent liability immunity from the whole red vaccine program. So that's, that's the reason why this sin is being perpetrated pregnant women should never get the shot because it kills their fetuses in many cases. And that's well documented.

The fertility clinics are seeing problems now with getting people pregnant that have already had the shot. The third thing, which is kind of the most important thing, or one of the most important things is once you've had COVID, you can never get it again. Over a hundred studies have proved this and the number of secondary cases disease, either zero or vanishingly small.

The CDC even agrees that you can't get COVID twice. Recovery from the disease prevents all the new variants. So you don't have to worry about any fancy name they may make up.

And the vaccine does not create any immunity whatsoever. Most of the people in the hospital with COVID-19 have already been vaccinated now 60% in the US, 80% in the UK and 90% in Israel. In Denmark, 83% of all cases have had the shot all cases that they pick up.

So there are worse. There are some studies that show the vaccinated become super spreaders who are more likely to transmit the virus. The last thing is if you have no symptoms, you cannot spread the virus.

It does not teleport. You know, we've never documented teleportation of the virus, you know, that's not a thing. So it goes through the air and droplets.

So that's, that's, those are the most important basics. And then I usually go into how the money goes around in healthcare to sort of start to let the listeners understand what's going on. But ask me anything you want.

I'm happy to answer hard questions if you have any. Well, so here's something, you know, you're talking about the way a virus is transmitted and you can go through droplets, you know, that kind of thing or touch some of them do go by touch, but this one is, you know, air droplets or sorry, a droplets of mucus lining, things like that. So can you just to the question of asymptomatic spread? I mean, it seems like such a foolish thought, like if somebody's not sick, can they spread a disease? They're not sick with showing symptoms, right? They're not infected.

I have, you know, all sorts of viruses in my body right now, but they haven't, you know, created an immune response where I'm like coughing or wheezing or anything like that. Therefore, I cannot, you're not worried, I have polio in my body, you're not worried about getting polio from me, right? Because I'm not symptomatic with it. So what do you think about all that asymptomatic spread? Because that's just pushed, that's peddled all the time.

And that just, it's peddled as part of the fear mongering campaigns to sell the vaccine to sell the whole narrative. And it's, it's an outrage. I mean, it's just, it's absolutely antithetical to anything we understand in medicine.

The thing that most people don't understand is just how many of the stories that they've been hearing are generated by these crazy companies that are basically criminals. I mean, you know, the pharmaceutical industry has more criminal settlements than any industry in history. It's an outrage.

And Pfizer leads the list billions of dollars a year. And they also have plenty of criminal judgments against them, right? Where they've tried the cases. So we're being hassled by people that are actually mobsters.

Here's, here's a quote. It's scary how this is by Peter Ross, who is a former marketing vice president Pfizer. He said, it's scary how many similarities there are between this industry and the mob, obscene amounts of money, killings and deaths, thriving politicians and others.

The difference is all these people in the drug industry look upon themselves as law abiding citizens. However, when they get together as a group, it's almost like when you have war atrocities, people do things they don't think they're capable of because the group can validate what you're doing is okay. That's from his book, *The Whistleblower*.

There's another quote that I like to put in at this point from Harry Loyne. What? No, please. Yeah, please share.

Yeah. Harry Loyne, who's a Park Davis CEO, who is responsible for promoting chloramphenicol, which is a similar situation. It was an antibiotic that skilled many children.

He said, if we put horse manure in a capsule, we could sell it to 95% of these doctors. So this is pharma's attitude towards them, towards the patients and towards the doctors. Yeah.

So I mean, obviously you were a physician, now retired. The whole protocol based mindset where you match up symptoms to a drug, I know that is usually the way that you would prescribe a drug as a doctor. Would you say that mindset, again, they piggyback the pharmaceutical companies piggyback on that protocol based mindset to push a drug like remdesivir or vaccine, something like that.

So you would just say that's harmful and that's kind of led to a lot of this, that mindset. Well, it's worse than that. These companies make up studies.

Let's see. You know what? My background is interfering with my ability to see my book. I was holding up my book.

Yeah, but this is audio only. So the name of the book is butchered by healthcare. And it describes how these companies have devolved into criminal organizations, faking their studies with the help of the FDA, which is totally bribed off.

50% of the money in the FDA comes directly from these companies in the form of user fees, which are fees incurred during the patent process and which has turned their attitude to the FDA towards these companies as viewing them as clients instead of entities to be regulated. So I mean, I'm inarticulate about it because it's so freaking crazy. We've let these people take over by supplying with our money.

And this vaccine thing is the most profitable drug in history after a year. I mean, it's incredible. Yeah.

So would you say a lot of this is motivated by profit when you're talking about Pfizer being a criminal organization, right? I mean, that would you say is the dominating motive. It's not the health of America. It's more financial-based and making money.

Well, there's a lot going on. And anyone who's been awake realizes that there are things going on in other countries that imply there's an international component to this that goes beyond just making money. And if I think it's beyond the scope of an hour long interview to get into that, but if your listeners are interested in the full story, there's three or four books out there that are very good and they will stick them in the show notes.

I think at the top of the list is RFK Jr's book called The Real Anthony Fauci. And he gets into the whole thing. The second easiest one to approach is Peter Bragan's book, and it's called COVID-19 and the Global Predators, We Are The Prey.

And both those are available on Amazon. You can get them on Kindle for \$3 each because the people are putting about not to make money, but to get the word out. I mean, this thing is beyond horrible.

So anyway, that's the international scene. And of course, the domestic scene and the pharmaceutical company scene is all about money. And just to give you an idea of the size of this thing, you know that healthcare is \$4 trillion in the US alone, roughly.

And that's about the size of the federal government's expenditures. The US government takes in \$3.5 trillion in tax dollars. Now, trillion is a lot of money.

I mean, it's just crazy. But these people are as big as our federal government. And that means that they have the money to completely buy anyone in Congress, which they have done.

And Congress is dominated by people who get enormous campaign, the biggest campaign contributions and lobbying efforts come from Big Pharma and the healthcare industry in America. So Congress entirely bought off the CDC, the World Health Organization, the NIH, and most of all, the FDA are completely captured by the Big Pharma corporations. And they're essentially sock puppets.

If you can imagine, you know what a sock puppet is? They're completely controlled by the financial interests. So the profits, the advisors at 40% profit margin for the last five years. Okay, now just think about what that means.

The ordinary industries have a 10% profit margin if they are very, very profitable. Some industries get by on 5% margins. But this is the only industries comparable to this are software.

And there's a couple other government supported industries that have 25% profit margins. But advisors at the head of the pack with the most profits. And I mean, it's crazy, we just rain money on healthcare, we spend twice as much as any first world country at all, they spend 10%.

We spent 20% of our GDP on healthcare. And it's ineffective in America, 50% of it is either useless or actually harmful. Yeah, yeah, I've heard similar things with how much we spend on our healthcare with the worst with worse outcomes than other nations are doing it.

Okay, so, you know, obviously, there's a lot of corruption involved. You know, if we want to get into the vaccine topic, we can talk about the various database under reporting factors. You know, there was a point in your podcast where you say there's this kind of sense of this global cabal kind of and even Dr. McCullough talks about it that this for deep formation psychosis happening over kind of the globe, right of people just buying into one ideology.

You know, is there anything there you want to pick up on maybe? It doesn't look good for the home team, because there's so many, there's so many of these entities who are approving and promoting the whole thing. And I, I didn't understand until I read those books, and I recommend RFK Junior's book, the real Anthony Fauci to your entire audience. I mean, it's it's incredible.

The, the Chinese are involved, I think they're opportunistic, I don't think they're the originators of the problem. I think they're the West and the European leaders. But the Chinese is they, they certainly work to develop this virus.

And it was in collaboration, strangely enough with us elements and this Tony Fauci guy supplied the funding. I mean, it's crazy. It's well documented.

And you can read about it in the Breggins book. There's a biologist named Li Min Yang, MD PhD, who has been speaking on alternative platforms. And she spoke at the American Association of Physicians and Surgeons meeting in October.

And she actually worked in those labs. And she is a whistleblower. And she, she says that the disease was first released on the Chinese people who, and the Chinese Communist Party facilitated the worldwide spread of the disease.

And that's well documented because they shut down the airlines going to inside China and allowed the airlines to continue to the United States. The Chinese doctors were forbidden to treat their own patients or to protect themselves or their families from being infected. And she says that the CCP, the Chinese Communist Party calls the bioweapon, the COVID, a bioweapon, and they call it unrestricted warfare against the West.

So, I mean, it's crazy. There are, there are many lines of evidence, including YouTube videos and everything else that a lot of other people are involved and as well, it has to be to get this thing going this, this large and the, there are billionaires and international banksters who are involved. You know, I call them the banksters because they're, they're, they're another industry that's captured their regulator.

You know, they've got a federal regulator and basically they run the regulators show, but this whole thing is, is essentially genocide because they've killed an awful lot of people. They've locked it down. They've damaged economies worldwide and we're certainly not at the end of it.

We've got to expect more. We can talk about the vaccine if you want. Yeah.

Yeah. We can go there in just a second. One thing to piggyback off of what you were just saying is so the, the narrative of the gain of function research producing what we see in COVID.

So you're, you're saying there, there's some credence to that whole narrative. Well, I mean, it's absolutely, it's absolutely well-documented. The money went through, you know, Obama maybe to his credit, received a letter from 80 scientists saying that this, this gain of function research should be cut off during his tenure.

And he told him to cut it off and Fauci, whether Obama approved of it or not, he sent the money through a European money launderer and it went to the Wuhan labs and the whole thing continued. So I mean, it's absolutely credible. It is a human manufactured virus.

Whether it was released or not by the Chinese is another question. You don't think they'd want to release it on their own people, but they're ruthless. I mean, their state religion is atheism and they really, they talk all the time about the burden their older people are on them.

So I mean, it's, it's absolutely crazy. You know, Gates is a Malthusian, which means that he and he, his father was very interested in this book called the population bomb by Paul Ehrlich. It scared, scared the heck out of us all.

In probably, I think it was in the late sixties, early seventies, it looked like we were going to eat our way through all the planet's resources, but it turns, it turns out that somehow the miracle of human life is that the population is going to decline. The numbers show

that it'll definitely decline in the next, I think it's next decade or two. And then the growth will go to a halt and then decline after the next decade or two.

So those are the numbers now. And this is no longer a concern. There are far few people starting than there ever were before.

Africa has tuned up amazingly just with the modern crop techniques and whatever technology has been developed. So it's the false narrative and these people are crazy and they're, they're sociopathic. They, they want to control the resources and they want to essentially create a more totalitarian society.

But this is, I mean, this is hard. This is too much to take in and a quick podcast. And I recommend that your listeners just focus on the medical aspects, which are obvious.

The, the information is lying on the pavement. And then if you get interested or you geek out about it or you're concerned about international things. And of course it's America too, but you can read those, those two books that I recommend, the Anthony, the real Anthony Fauci and COVID-19, the global predators, we are the prey by the bragans.

Yeah, I think those would be good resources for people. We'll stick them in show notes. Yeah, yeah, yeah, yeah.

We'll get them in there. So can you walk through, again, let's, let's move on to like, you know, we've talked about some of the, the, the lies of the deception going on. So maybe we can actually get into treatment of COVID-19 and how that's being suppressed.

So, you know, you talk about early treatment is huge, right? But also we have these complications with the vaccines and people wanting to opt for, you know, pretreatment as an, a vaccine that will keep you from getting in, but we know that there's breakthrough, like tons of breakthrough cases and provides no immunity. So let's, let's get into more into that. Yeah, they had to change the definition of vaccination vaccine.

And I mean, it's, it's like, it's like you couldn't make this stuff up. So when I, in 2020, when I first heard the vaccine had 90 or 95% efficacy, I thought it was a joke. I knew I'd been studying healthcare because I was writing *Butchered by Healthcare*, which is my book about healthcare on Amazon.

And I knew this industry's primary vaccine moneymakers over the last 20 years are nearly useless. Influenza was a total failure considering the costs and the tiny business benefits. And you guys can go to Cochrane reviews, C O C H R A N E reviews on the net and look at the meta-analyses, the summaries and determine that for yourself.

The HPV vaccine, which we've given to all the young people for decades was rejected by the Japanese regulators because half the studies were covered up by the manufacturer. Obviously they didn't work. Despite this, we use HPV vaccine universally in Europe and

the US.

So, but Japan threw it out the window. So the Fauci guy, his position has allowed him to destroy, distribute over half the worldwide healthcare research money over recent decades. So this is almost a trillion dollars.

And here's what RFK Jr wrote about him. Dr. Fauci has deliberately and systematically used his staggering power over federal scientific research, medical schools, medical journals, and the careers of individual scientists to derail inquiry and obstruct research. So he used to blame for many of the lies about COVID and has been directly responsible for untold deaths.

He was responsible for turning Africa into a testing ground for medications. And I mean, there's a lot of fatalities. It's really crazy.

That book is essentially a blueprint for Fauci's criminal prosecution. And the fact that he's still around, it just is testament to the vast power he has over healthcare money. He and Gates have distributed, I think it's 60 or 65% of the total healthcare money given to researchers in the world and they can destroy people's careers if they don't absolutely play the line that Fauci wants to be heard.

So it's a freaking scandal. Yeah. Yeah.

I mean, again, just to interact with that a little bit, it is odd how in a way for people that have open eyes, it is very blatant what's going on. So it's odd that it's almost like there's little cookie crumbs where you can pick it up and you can really find the truth if you apply yourself to it. Yeah.

So it's odd that there may be ... Again, if it's something this big, there's got to be enough to shift through the lies and define the truth. And we can do that, but it is odd, again, the schism in society. One man, Fauci, in a sense, this is a religion.

There's faith being placed in one man. He's sort of the savior. He's the one providing the answers.

He's the prophet. So there is a religious element to this and people placing their faith and looking towards the state in a sense, institutionalized health care to save them, to be their savior. So I find that aspect very fascinating, just watching it all unfold.

I'm a follower of Christ and a lot of my friends have bought into it. There's a lot of Christians that have bought into it that usually Christians are the ones looking for the truth. Again, there's this ... And Dr. Vercola talks about it in Rogan's podcast about even the church leaders, every institution is kind of blinded by this through the lies of Fauci trickling down through physicians in America.

So I completely agreed. That would just be kind of my interaction with the things. What people don't fully understand is that even making up studies to demonstrate a marketing point has been Big Pharma's standard operating procedure for decades.

And before the COVID pandemic, I reviewed studies that were obviously manipulated to produce certain results. For example, they changed statistics. They used contract research groups in Africa and other countries that wouldn't get another contract if they didn't sing the exact song that the pharma companies wanted sung.

And the ghostwriting rate is 95% in all medical journals. The British medical journals see ... Isn't that crazy? They're ghostwritten by the industry. And the British medical journal is sort of the only honest journal standing still.

And of course they have to ... They get advertising revenue from these pharma companies too. So that they're the only ones with any credibility. The rest of the biggest reputation medical journals are all just completely ruined and they're left with no more credibility than the FDA.

Yeah. Yeah. I mean, so this is just a point to support skepticism of academic journals, that kind of thing.

But I got my master's in environmental engineering. So that's my field. It's environmental work.

And to just kind of connect the two because we apply synthetic chemicals in agriculture and things like that in our environment. Glyphosate was not ranked a carcinogen until very recently. And Monsanto and Bayer and these people that produced that chemical, obviously had the studies to know, but ghostwriting and money like that has presented evidence that no, this is completely safe, right? To spray this in the field to put it on our food and then we'll ingest it.

So again, I think there's a lot of different fields where there is this kind of line and then now we're seeing it manifest in the medical field through a crisis like this. Yeah. The big food industry is also regulated by the Food and Drug Administration, the FDA.

And they basically have been allowed to go wild and do anything they want. I mean, it's crazy. The lines about these high carbohydrate diets that are total lies.

I mean, the high carbohydrate diets, the best new evidence is that they have heavily contributed to our heart disease epidemic and that higher fat, higher protein, higher animal stuff diets are much, much healthier. Exactly. Yeah.

Even the Framingham studies. I mean, that was the guy, well, I forget his name, but he omitted France and a few other studies to show saturated fats cause heart disease and they actually don't. And cholesterol, the whole cholesterol narrative and the cholesterol

blocker drugs narrative is just almost total nonsense.

I mean, it just, it, those cholesterol blockers are one of the biggest boondoggles in pharmaceutical history and also one of the most profitable drugs that they've ever had. I mean, it's absolutely crazy. Yeah.

Okay. Yeah. So yeah, so that maybe that's kind of, you know, framework stuff to kind of get us thinking about why there are lies going on.

So, so I would emphasize again, okay, if the listeners want that a great source to start out with, they should look at a Rogan's interview and we will post that a version of that that's on bit shoot. So they don't have to pay for Spotify. Yeah.

Okay. Yeah. It's on Spotify.

And somehow I I've heard rumors that it's getting censored off Spotify, but the censorship is insane. I mean, it's just, we know that the first amendment is the most important amendment. It's foundational to our constitution and it's partial ruination is the biggest disaster in my lifetime.

I've never heard anything like this before. And the idea that in the last, whatever it is, a year and a half, we've allowed these tech companies to censor content on the legal pretext that their private companies is just, it's, it's horrible that, and we'll also put a link to one of RFK speeches about how the constitution has been more or less taken down and how, you know, it's, it's really, it's awful. I mean, the only the second amendment out of the constitutional amendments is still intact more or less.

And people are buying guns like, like their hotcakes. Yeah. There's so many issues.

Yeah. That's the complexity of introducing the international stuff. I mean, it almost, we almost lose credibility, but it's a complicated situation.

There are a lot of players and I suggest again, your, your listeners, if they're new to this, just focus on the medical issues, which they can ascertain for themselves. And Rogan Rogan's interview is a good entree and we'll have other resources in the show notes. Exactly.

So can you talk about you? I listened to your episode about the Omicron variant. I mean, there might be one reported death from that. And we're, we are now like, I think Joe Biden just said, he just made a public statement that our only defense against Omicron is please get vaccinated, get your booster.

And it's like, just the worst advice, literally anybody could give somebody nothing based in reality at all concerning Omicron. And you were talking about how this is, this is likely to give everybody natural immunity. It's very, nobody's going to, I mean, there might be

a few people that die that are in like have comorbidities and all that, but yeah.

So can you kind of walk us through that? Yeah, this is, this is disease mongering and this is a bot is taking a page from pharma's book and they've done this for decades and they take a disease, invent, invent a cure for it and claim the cure is the only thing people should focus on and they patent the cure. And I mean, it's just, it's just a horrible thing to allow these people to do it with our, our precious healthcare money. Yeah.

So Omicron, I mean, it's very infectious. I now know three or four people that have COVID right now and they, they probably have the Omicron variant and the ones I talked to get better in one to two days. And I, I help them understand the therapies because with the other variants, if they're older or have medical problems, the therapies really help.

It decreases the death rate down to 10% or 15% of what it would have been. So I tell them about ivermectin and which has been popularized by Joe Rogan. I tell them about hydroxychloroquine, which we've known for decades to have an avid antiviral effect and which we have proven with 250 studies to be quite effective against COVID.

I tell them about the combination of nutraceuticals that they should get on, but it probably makes no difference because Omicron is not a big deal and people will have the latest stuff that I was reading today is that there's little doubt that it will completely immunize anyone who's had it to any, any future virus that's related. So it's, it's totally, totally good news. And they're trying to disease monger because the group of people that are pushing this narrative have blood on their hands.

And if we ever get through this thing and reality, and we return to reality, you know, I mean, they should all be put on trial at an international court, but there was an awful lot of them. So I think, I think there's going to be an amnesty and they'll all say, well, we just, we just were all fooled. Yeah.

Yeah. Yeah. No claim ignorance.

It's weird how like it's been almost what, well, yeah, two years now since all this happened. Yeah. We're coming on two years of like, meeting and speak up about, yeah, I mean, you've been doing it longer than I have.

I mean, I just started to really try to speak up more about it. I mean, I've always been skeptical of the whole thing. And I was on the, yeah, skeptical, skeptical studies that were, you know, I was on the saturated fat thing, you know, but yeah, so it's been a clown show.

It's been a clown show. And the only it'd be laughable if it, if it wasn't such a serious thing. And if we hadn't seen such economic and personal destruction from it, I mean, I have a friend who, you know, one of the effects of this virus is blood clotting thrombosis.

And when they check people 24 hours after they've gotten the virus, there's evidence of this in their blood samples in half of them. Right. Well, the real problem is they get strokes and all kinds of other things that freaking knock them off.

They get inflammatory effects like myocarditis, which causes permanent heart damage. It's just like having a permanent heart attack because heart cells don't regenerate. But my friend had a stroke a few weeks after the, the vaccine, right? Or maybe a booster.

And he sort of turned himself into a golden retriever. He can't talk and we can't, he can't, and we can't, he doesn't understand us. So we're out of luck with that guy.

He walks around, looks normal, but he basically, he ruined himself by listening to the narrative and believing what they said. Yeah, that's, it's heinous. Yeah, what's going on.

It's so wicked. And I'm gonna be really curious to see these people that are going to be injured by the vaccine. And I've heard you're more likely as a child to get myocarditis than you are to get a lethal, you know, infection from COVID-19.

And we are, we are like, basically, what's, what's the word of the word? We're just gamble, oh, gambling, sorry, we're gambling with our children by giving them the vaccine. Right? Like, oh, is it gonna, are they gonna get myocarditis or are they gonna get a lethal COVID-19? I mean, yeah, a healthy kid is not going to die from COVID-19. I mean, it can happen obviously, but it's your odds are much less than getting myocarditis and having permanent heart damage, like you're saying, and the amount of athletes dying is very problematic.

I mean, healthy, strong individuals dying because their heart is to inflame. My friend did a 513, he's 68. He did a 513 rock climb the day before he got the massive stroke.

Okay, so he's an he's an athlete that had a problem with the vaccine and all likelihood his kids don't believe me. And answered answered my texts with obscenities when I told him to not get the guy anymore vaccines, but you know, what can I do? Yeah. So you just emphasize this thing about the why they're pushing the backs on little kids, they're trying to get the kids approved between 16 and 18.

And if they manage to do that, they will have permanent immunity from liability. This is crazy. Yeah, here's another couple of factoids that are very similar.

Remdesivir is a drug that is approved or in some provisional improvement category for COVID treatment, despite all the studies showed that it killed 25% of the people that was treated with it. And the reason why that was approved was it didn't work. Because if they got a drug that worked, they'd no longer be able to do this experimental stuff.

Yeah, they admitted ivermectin, the combination of nutraceuticals helped. Even that they it'd be against a law to do this experimental vaccine. There's another one.

Why are the people who are entering the US illegally not offered the vax? The reason is, is there, there are citizens from other countries who and they're not covered by the lawsuit immunity protection. Yeah, crazy. You know, if this stuff really worked, and it really helped, they definitely be vaccinated, right? Not the border.

But you know, but the thing is all in the service of trying to get this thing approved and all liability and more money. I mean, it's just it's it's evil. Yeah, keeps going back to that.

You know, Google's original motto, don't you? I don't know if I heard that. Do you know evil? Oh, yes, yes. Yeah.

But you know, the YouTube is they're the center of the censoring cabal. It's absolutely crazy. And you know, they're not, they're not there.

I would say they're doing a great deal of evil now. But they nobody said that they're not honest. And so what they did is they changed their motto.

Yeah, it's not that crazy. Yeah. I mean, it's just it's you couldn't make this stuff up.

They changed the motto. I don't think they said we're allowed to do evil, but they didn't want a boldly state that we should do no evil. Yeah.

That's crazy. It is crazy. I had heard that that is that is wild.

Yeah, the censoring, you know, the First Amendment stuff you were getting into earlier. So do you think if let's just say hypothetically, none of the censoring happened and like, you were able to I mean, you are you have your stuff on Spotify still. But you know, let's just say more voices weren't silenced.

Do you think people that would have people would have waken woken up quicker? And they're like, yeah, instantly. Yeah, I mean, you know, before they were doing these strategies successfully, I don't think they would have woken up instantly, because even the strategies they were doing was included faking studies. Okay, they've got studies of hydroxychloroquine when they gave doses that were toxic in a third world country and had a few people die.

And then they publicized this crap. And they had another study that was published in the Lancet, which became apparent it was entirely faked. And so these these sorts of studies were being done on a lesser scale, the last two decades, very obviously, it was obvious to keen observers.

And it became obvious to me when I started reading about this four years ago. But this wholesale defamation of a harmless drug like ivermectin, claiming it was horse, this and that and cow, this and that, you know, that was all funded by these muddied interests. And I mean, it was just ubiquitous, thousands and thousands of posts and thousands of,

you know, Wikipedia is under constant attack by these companies rewriting the stories.

And I'm just I'm just amazed they still have that article, you your listeners can Google pharmaceutical company settlements, and they can find out the magnitude of these things in the years of the settlements. And there's a there's a page of shame in there. I'm amazed they haven't managed to take that down entirely.

But but they're, that's what they do. They they hire these, these writers just to turn night to day and day to night. I mean, it's crazy.

Yeah. Yeah, all really good points. So as a, you know, former physician, how do you think people should treat their health? You know, how do you think people should like think about their health, you know, in the midst of something like this, you know, if we're like, you know, you know, we're claiming here, people are being lied to like crazy in the arena of health and public discourse.

So so you've quoted some names like Robert F. Kennedy Jr. You know, you know, but who should we look to or trust or, you know, where are you saying get your information from? Do we only read, you know, Robert Kennedy's books, you know, or sources? Yeah, but basically, you have to regard the entire mainstream media as being bought by these moneyed interests. And you can't get a rational word out of a politician these days, there don't seem to be any international politicians that are doing a good job with the therapies or rejecting the vaccine. I don't know whether they they're afraid, they're they're bribed, or whether they're certain that they'll lose the next election.

It's unclear. And we personally, we know personally, some of these people, and I can't figure it out because I thought they had a lot of integrity. So I think that a good starting point is butchered by healthcare, if you buy the ebook version, that's available for about \$4.

And there's 500 links in it that you can link to the material that in my source material, and my, my stuff is entirely derivative. I haven't, it's not I don't have an original thought, it's all been said before by whistle ball or worse. And I put it all together in an easy to read book, and you can click through the links and understand what how messed up on modern medicine is and how, how these pharmaceutical companies could be so fouled up that they're they're participating in this, this, these crimes against us, because they were they were doing stuff that was very similar for decades.

And this just they've stepped it up because they've been allowed to get away with it. So I you know, I think that, you know, there is there are some nutty narratives out there. But if you start with McCullough, and you I've got a couple of more videos that you can look at in his in the show notes.

And there is an online treatment resource that you that's very credible American

Academy of Physicians and Surgeons, surgeons COVID treatment guide, you can Google that, or look at the link online, and you can read about things like the nutraceutical bundle that's almost as good as taking the antibiotics. If you're older, you're sick, you should definitely take the antibiotics and the whole thing. But if you're not, it doesn't do any harm to take 200 milligrams of zinc for five days and then 50 milligrams after that.

And vitamin D, push your levels and check your levels, get your levels up to, you know, 100. I mean, Florida lifeguards have levels without supplementation of 130. And you can you can do that.

And then vitamin C in a couple thousand milligrams a day, dosages, and what's the other one, zinc, vitamin C, D and quercetin. Quercetin is a nutritional supplement that works a little bit like hydroxychloroquine or ivermectin, it helps the zinc go into the cells, somehow. And zinc seems to be the best treatment for viral illnesses that we've ever had.

So, you know, there's other things you should be aware of, like the monoclonal antibodies, which actually work. That's an expensive medication that it's being covered up in some places, but you can get that if you're an older person, or you have your chronically obese, or you have severe medical problems, you can get that in the early phases, the illness, sometimes it'll clear you up within a short time. But as we said before, the amacron variant is not that bad.

But I think if you're if you have medical problems or anything else, you should should know about these treatments and certainly start on nutraceuticals. Yeah, I take zinc orotate every day. So I mean, I haven't had a viral illness in a very long time since I've been taking zinc.

I mean, zinc is just amazing for an antiviral. You're a young, studly dude, though. You're not getting any problems.

That's true. That's true. I'm 23.

23. Yeah, so I certainly be getting sick left and right, obviously, you know, but obviously, zinc is so good for being an antiviral. And Dr. McCullough, in his interview said that iodine kills the the virus on contact.

I personally ingest Lugol's iodine, I put it in some of my water with some trace minerals every day. He wasn't talking about that. He was talking about, I believe the dose a few drops of that stuff in, you know, like a quarter cup of water, and you snort it through your nose, now your mouth.

And the other thing you can use is quarter strength peroxide, that brown stuff that costs, you know, eight bucks at Walmart. Quarter strength, three parts water and one part peroxide, and you can you can put that in your mouth and your nose and that that kills

the viruses in those areas. And he claims that it decreases symptomatology because it decreases the source of the problems, which are kind of in your nasal area and your throat.

Yeah. But I don't know about taking Lugol's iodine chronically. I'm not an expert about that.

Yeah, I just thought it was a I just heard it's a good source of getting iodine into your body, you know, seafood's high in iodine if you want to like get it through a whole food. But yeah, but yeah, I just heard Lugol's you know, that's another way another source of iodine, you know, but it's iodine, obviously, and then your body breaks it down into iodine. It's not just straight up iodine or whatever.

So yeah, I don't know if that'd be helpful or not. For any of your listeners who don't think we're in trouble worldwide, they need to study what's going on in Germany, Austria and Australia, because those seem to be the worst, the worst problems internationally. And I mean, it's devolving into extremely authoritarian governments and their, their Austria just passed a law two days ago that says they're going to force people to get the jab.

And if they don't, they get progressively increasing fines. So this is the first, I mean, how these jackals have managed to influence these governments like this and buy off these leaders, I don't know, I guess these guys have naturally bad tendencies. But I mean, it's it seems like a ubiquitous problem.

And those three countries seem to me to be the worst, you can find links to Australian problems on the internet, but there are a lot of it censored and shut down. They're having huge demonstrations. And I mean, it's it's it's amazing.

They've given up all their, their weapons to their their gun. And say, they, I think they have some revolvers, but and some hunting rifles, but they, you know, here, we've got the Second Amendment. So you can you can keep your weapons.

And I think that it's a it's a safeguard of a kind. It is. Yeah, it gets totalitarianism.

I was I was listening to a podcast where they had a guy talking about the lead up to Nazi Germany and the way they would interact with the Jews, being similar to how we treat the unvaccinated that you start to first you say, well, what they did at the Jews is first they said, OK, you're not allowed to use this restroom because of X, Y, and Z, but you can use these restrooms. And they're like, OK, great, we can still use all those other restrooms. So we're fine.

Right. They can have that one thing. Oh, now you can't do this.

Now you can't do that. And it's the same thing with the unvaccinated. OK, you can't work.

Well, then the next thing, maybe you can't get food. And maybe the next thing you can't do this, can't do this. And then eventually, you know, you're put into a train car and you're shipped off to Ostowich.

You know, this is this is the progression of things into totalitarian states. So, you know, what do you think about that? You know, the people who really understand this are people that came from Soviet block countries and China. And at that January 6th rally, there were filmmakers.

There was a filmmaker who I think he produced the planned demic, which had been viewed a million times. And it's still available. But he was interviewing the people.

He was there only to interview the people from other countries who had been under totalitarian or communist rules to find out what their opinion of it was. And they all said exactly the same thing. They said, this looks just like what was going on in my country before things turned to S.H.I.T. You know, I mean, so we need to listen to these these Cassandras.

And you know, you've heard that word, Cassandra, right? Now, Cassandra is a person in a Greek mythology, a woman who agreed to sleep with Zeus, the head of the gods. Then she changed her mind and Zeus faded her to know all prophecies, but to be believed by no one. So I feel like the Cassandra is entered the vernacular as an adjective.

I feel like a Cassandra or maybe a noun a lot because it's hard. It's hard to get anyone to believe what's going on. We know what's going on from all the data.

It's a vast amount of data. And we can put my summary document with all the references in your show notes, too. Yeah.

It's called Why COVID is so hard to understand. You just can't make this stuff up. Yeah.

But you know, on the good side, I think a lot of people are getting red pill and see it now. You know, these these newscasters that are all getting freaking COVID after three of these shots, you know, they suffered through the mild complications, even if they didn't kick the bucket or get a stroke or any of that. They were sick for a day or two and they get COVID and they're outraged.

It's like they never, they never, they didn't get the memo that it wasn't exactly an immunizing protection. It was not a vaccine. It was a fraud.

And for every single age group, our data now suggests that we're having far more fatalities and problems than than the good this thing does. It does a small amount of good. But should we talk about the various database? Are you familiar with that? Yes, please.

Yeah. Let's let's let's go through that. But before we go there, I've heard there's a study about, well, this is going to connect obviously, this will lead into it, but all cause mortality is higher in the vaccinated than the unvaccinated.

Their immune systems and their bodies are weaker than those that are vaccinated. Those are unvaccinated because it's immunosuppressant, it's an immunosuppressant, the spike protein, the mRNA technology being put into your body, it suppresses your immunity, right? Because you have spike proteins being manufactured in your cells, which are, you know, you're basically allergic to that, right? It's an enemy. You're telling your body to produce copious amounts of enemies and it congregates in your heart and people get myocarditis.

So that statement, what do you, you know, what do you think about that? That's important. That's a important concept if you hear about absolute or all cause mortality. So there are these guys that walk around San Francisco and interview people on the street and they ask, well, what percent of the people in the United States do you think of diet of COVID, you know, and they'll say, I don't know, 20%.

But the, the all cause mortality did not change in 2020. Yeah. In other words, the same number of 8,000 people or whatever it is die a day in the United States.

And that didn't, that didn't go up and it didn't go down. This thing is it harvest people who have one foot on the banana peel and one foot in the grave already. And so, so anyway, but the all cause mortality did go up this year and it's thought to be due to this vaccine.

Yeah. And we have significant evidence that this thing is causing a lot of hospitalizations. It seems to be causing cancers to worsen and it's, it's a real hazard.

And this is against the small amount of good that it does, which the study showed that it decreases the severity of the disease without decreasing the infectiousness or the ability to transmit for two to four months only. So this is, you take all this risk for that small benefit. So we've got this database called the vaccine adverse event reporting system.

And you know, frankly, it's called VAERS. So frankly, I'm just, I'm just amazed that it still functions with all these other adulterations of our, of our systems. So it's documented over 18,000 deaths to date due to the vaccine.

And these mean these are primarily deaths that are almost immediate. Most of the people who die from, well, it's thought that most of the people who die from the vaccine or half of them die within 48 hours. So the CDC makes the ridiculous claim that no deaths have occurred despite this database, which is still functional, 80,000 hospitalizations, 800,000 bad reactions reported.

But the underreporting of this thing is thought to be about one in a hundred. So it's

thought that a hundred reactions occur for everyone that gets into the database. That's the estimate.

But for deaths, of course, since you can count bodies pretty easily, it's not underreported that much. That would be an awful lot of deaths. It's probably underreported by five times.

So we've had probably a hundred thousand deaths from COVID or the COVID vaccines. Other estimates, credible estimates are 150,000. So that's a lot of freaking people.

And this increase in absolute mortality or total deaths per day in the United States, it certainly is highly suggestive that something nasty is going on. And the vaccines, the obvious thing to point to past vaccines have been yanked from the market after less than 50 fatalities. Yeah.

Can you imagine? I mean, we're asleep at the wheel and there's nobody in charge and the powers would be, I mean, they've, we gotta, we gotta have some sort of change in the politics if we want to survive because these people are operating against our interests. Yeah. No, yeah.

That makes sense on the deaths and bears are probably not as underreported as maybe the reactions because you would get a death certificate. You would have a dead body. You would get a death certificate.

There still is a sense in which probably there are some people that die and they attribute it to COVID because they had COVID, maybe a breakthrough case when it really was the vaccine had compromised their immune system and they weren't able to fight off something, you know. You understand that the vast majority of the cases now are breakthrough cases. It's well over 50% in all the countries that have been heavily vaccinated.

Yeah. Yeah. That makes a lot of sense.

Anything else concerning bears? I mean, do you think, so you would put that estimate at one to 100, 100 times? Because I know there's a 30. No, no, it's the deaths I put it at instead of 18,000, there are probably 100,000 or 150,000, which is an unbelievable toll. Even, even eight, even, even at 18,000, the thing should have been yanked off the market.

Every other vaccine has been jerked from the market when there's been 50 deaths or even 30 deaths. Yeah. And they get a black box warning, which black box warning is this thing.

See, the FDA is so completely bought since they, since the early 2000s, when they're, they started getting paid by these user fees, which are fees generated during the patent

application process. So there, the FDA is so bought off that they, they are claiming that there are no deaths from the vaccine. I mean, it's just insane.

You couldn't make that up. I mean, it's so absurd. Yeah.

Yeah. You really see makes that claim. Sorry.

Okay. Gotcha. Yeah, it is.

It's such a dramatic story the past two, two years in a sense. You know, you have two sides warring against one another. And these medical facts have been turned political.

So, you know, they start screaming Trump whenever you talk about COVID. I mean, it's crazy. Yeah.

And you know, the hydroxychloroquine, which like ivermectin, it's probably not quite as good as ivermectin against COVID and viruses, but it's quite good. But that was, they were so out to get Trump that they managed to discredit iver, hydroxychloroquine. I mean, it's crazy because Trump endorsed it.

I can tell the story about how he found out about it. Sure. Yeah, that'd be a great place to have you heard of Zalenko.

He's a family practitioner in upstate New York. Okay. And that guy, he was kind of knocking on death's door himself because he had some sort of unusual cancer.

So he was looking at nutraceuticals and alternative therapies. And he realized that cancer therapies in the United States are, they're a mess. And the reason why they're a mess, and I'm going to just inject my footnote, is that doctors get 25% of the cost of the cancer therapy drugs that they administer in their offices.

And that amounts to a kickback, which would be illegal if it was between doctors. If you and I were doctors and we, we said, okay, here's a drug, I'm going to give it to you. You can, you can, you can get 25% if you distribute and sell this drug.

That's an illegal act and that we could go both go to jail if we were caught. But anyway, the oncologists, you know, they have a rough job. I mean, they deal with this death and dying and all this crazy stuff, but they take 20% of the, of the total gross costs of these drugs, and they get that back for giving the drug.

Can you see how bad that is? Yeah, I mean, their income is skyrocketed. But anyway, where was I? You were telling the story of the guy in upside. Oh, yeah.

Zev Zilenko. So you can, you can see podcasts with this guy on either Peter Breggin's website or RFK juniors website, which I think is called the Children's Health Defenders. But this guy was looking around for alternative therapies for cancer because he had

cancer.

He was on, you know, there was an accident that says nothing so focuses the mind as the prospect of being hung in the morning. Right? That one. Well, so this guy figured out that he had a storm of patients in with COVID.

It was very common. He says that his office volume quadruple while he was trying to treat all these old friends of his. And he had to figure out what to do because there were no guidelines.

The guidelines, the shocking recommendations from medical authorities was to quote, shelter at home and receive no treatment until you get so sick, you can hardly breathe. And at that point, you're supposed to go to the hospital and get innovation in Remdesivir, which kills 25% of you off the bat, right? You realize hospitals are I'm rambling here, but hospitals are getting paid about \$100,000 each for each COVID patient. So their treatments and even their deaths, they get bonuses for.

Yeah, they get bonuses. Anyway, for Remdesivir. But anyway, so this guy came up, he did some looking around the internet, and he figured out that zinc was the thing and that hydroxychloroquine helped zinc absorption or utilization somehow.

And he started using that and these people would get better in 24 hours. I mean, he was amazing. And so he started, he virtually had no fatalities.

He contacted Trump via a video. And the next thing you know, Trump was talking about hydroxychloroquine and zinc, I believe, and then this the storm of publicity, and all the adverse narratives popped up from the the opposition. So so Zev's a true hero.

And I hope he makes it a while longer with his cancer. He's still alive. Yeah, that's a yeah, it's, I think I think we hit a lot in terms of corruption in terms of what's beneficial where we should look at.

So you know, we're kind of come up on an hour, which is what we had agreed upon. So are do you have any? Obviously, he's got Dr. Yoho has Robert Yoho author.com. I'll put that in the show notes. He has the book he's dropped a few times in our conversation butchered by healthcare.

You can find that on Amazon or you can get it you can give an ebook version of it, but you can get a physical copy as well. And then he has a podcast surviving healthcare and that you can find on Spotify and is it on Apple podcast? It's on it's on all those platforms. They don't seem to be censoring that sort of thing.

They if this is on if you tried to put this on a YouTube video, they get rid of it in an hour, you'd have to put it up on bit shoot or something. Yeah, you would be done. But I would I would tell your listeners to go listen to McCulloch's video, I will put that at the top of

show notes.

Yeah, agreed. Yeah, so any, any last kind of things you want to plug about kind of your platform? I think I kind of hit most of it. But is there anything? So I would say, I would say that I'm, you know, I sound like a complete cynic.

And I am in a lot of ways. I mean, nothing could convince me about the evil of these companies more. But I want to tell your listeners that healthcare is not all bad that we do miracles every day, that you if you're sick, and you have problems, you have to trust somebody.

And you should do your research and do your best. And we've got a couple of things you can do, you can, you can do internet consultations now. And you couldn't do that before Trump put out an executive order that said that doctors can't be censured for treating people over the phone.

And you can also go to the patient advocacy sites. And you can talk to people who are laymen, who know as much about these diseases as any doctor, and they'll help you free. So those are the two things you're Rocky, you're too young to worry about this stuff.

But in my age group, they're falling all around me. Yeah, yeah, yeah, I can imagine. Yeah, I haven't had any friends die from COVID or anything.

But just my kind of interaction with why I guess I'm a little riled up. I mean, I hear about the deception and all that. But my dad has actually just passed away this past summer from a brain tumor, and he died at 46.

So I'm a little angry to it the way they would they would treat cancer, right? I don't think obviously, you know, the cancer is crazy, the amount of chronic illnesses, all these things. I mean, there's so much corruption and deception. And I think obviously, you agree, we can do better, right? You know, we can do much better.

So I agree, there is good things happening. Also, there are people that are doing the right thing. Some people are, you know, so yeah, that's kind of my personal matter in healthcare, you know.

Yeah, I really appreciate the opportunity to talk to you. Yes, yeah, it was it was it was a pleasure. And yeah, guys, please go check this stuff out.

A lot of really good listens. I haven't bought the book yet personally, but I want to get it. And I hope to read it here soon.

So thank you so much for joining me, Dr. Yoho. It's Yoho, right? It's Yoho, and you're welcome to call me Robert. Hori Rafi.

Thanks. The pleasure. Yeah.

Yeah. Yeah.

[Music]
